Newport News Shipbuilding, a division of HII

About Us

For 140 years, the ships built at Newport News Shipbuilding (NNS), like the American shipbuilders who built them, have served our nation in peace and war, in times of adversity and in times of abundance. Our legacy of "Always Good Ships," includes the design, construction, overhaul and repair of more than 800 ships for the U.S. Navy and commercial customers.

Today, Newport News Shipbuilding, a division of HII, is proud to design, build and maintain nuclear-powered aircraft carriers and submarines and provide fleet services for the U.S. Navy. Headquartered in Newport News, Virginia, the shipyard's vast facilities span more than 550 acres along two miles of waterfront on the historic James River.

We are the largest industrial employer in Virginia, employing more than 27,000 people, many of whom are third- and fourth-generation shipbuilders.

Aircraft Carriers

Carrier Construction

For more than 75 years, the American shipbuilders at NNS have designed and built more than 30 aircraft carriers, including the world's first nuclear-powered aircraft carrier, *Enterprise* (CVN 65), and all 10 of the *Nimitz*-class nuclear-powered carriers. Today, our shipbuilders are designing and building the next-generation of aircraft carriers—the *Gerald R. Ford* class – to provide the U.S. Navy with a highly flexible and survivable platform to meet the operational needs of the 21st century. The second-in-class, *John F. Kennedy* (CVN 79), left NNS in September 2026 after achieving preliminary acceptance by the U.S. Navy. These aircraft carriers feature advanced capabilities that increase the power of our military's fleet. Construction is underway on two more aircraft carriers at NNS: *Enterprise* (CVN 80) and CVN 81.

Construction of the next-generation of aircraft carriers and the most advanced submarines is well underway

Carrier Refueling and Complex Overhaul (RCOH)

We perform RCOH work on *Nimitz*-class aircraft carriers. The undertaking was described in a 2002 Rand Study as one of the most challenging engineering and industrial tasks undertaken anywhere by an organization. The project is performed once during a carrier's 50-year life and includes refueling of nuclear reactors, as well as significant repair, upgrade and modernization work. Currently at NNS, USS *John C. Stennis* (CVN 74) and USS *Harry S. Truman* (CVN 75) are the seventh and eighth, respectively, *Nimitz*-class carrier undergoing RCOH.

Nuclear-Powered Carrier Inactivation

NNS is proud to inactivate nuclear-powered aircraft carriers after their 50+ years of service. Once the service life of a carrier is complete, the ship comes to NNS for defueling and inactivation. NNS completed the inactivation of the former *Enterprise* (CVN 65) in 2018 and has prepared her for tow to a scrap yard. NNS is preparing for the first *Nimitz*-class inactivation, paving the way for the inactivation of the class's 10 ships over the span of four decades.

Submarines

Submarine Construction

Using expertise developed from building more than 60 submarines over four decades, NNS designs and builds nuclear-powered submarines. Currently, we are building the most advanced attack submarines in the world: the *Virginia* class. Designed to meet the Navy's requirements in a post-Cold War era, the advanced capabilities of these ships increase firepower, maneuverability and stealth. NNS is producing these submarines as part of an innovative agreement with General

Dynamics Electric Boat (GDEB). The team has delivered 26 *Virginia*-class boats, and work continues on additional submarines. USS *Massachusetts* (SSN 798) was delivered to the U.S. Navy in November 2025. NNS is also working on the *Columbia*-class program, the Navy's No. 1 budget priority and the replacement for the sea-based leg of the nuclear triad. NNS is a major contractor and shipbuilding partner in the *Columbia*-class program, constructing and delivering six module sections per submarine under contract to GDEB.

Submarine Design and Engineering

NNS designs and provides on-site installation of state-of-the-art technologies for *Los Angeles*-class and *Seawolf*-class attack submarines to keep our fleet the most

capable in the world. Additionally, we are supporting Electric Boat, through design and engineering efforts, on the *Columbia*-class Ballistic Missile Submarine Program.

Fleet Support Programs

From design to construction, maintenance to technical and life cycle logistics, we provide quality services to the submarine and aircraft carrier communities, wherever there is a need, through mobile and in-house capabilities at our facilities in Newport News and San Diego, and at naval bases around the world.

Charleston Operations

Beyond the main shipyard in Newport News, Va., which encompasses 550 acres along the James River, NNS operates an additional location in South Carolina to support production. Newport News Shipbuilding – Charleston Operations in Goose Creek, S.C. began operating under NNS in 2025. It is located on 45-acres with more than 480,000 square feet of manufacturing space, supporting the construction of nuclear-powered submarine and aircraft carrier modules and structures.

About HII

HII is America's Seapower Company. The nation's largest shipbuilder, HII builds the manned and unmanned maritime systems and all-domain mission technologies that project U.S. and allied power around the world. With a more than 140-year history of advancing U.S. national security, HII is headquartered in Virginia and employs 46,000 people across three divisions. For more information, visit:
